SUMMARY OF THE PROJECT:

The GARVELAND project, within the framework of the INTERREG POCTEP 2014-2020 programme, has the general objective of promoting electric vehicles in the cross-border cooperation area by connecting the Algarve and Andalusia with "green routes" involving municipalities, protected areas and enclaves of tourist interest.

To achieve this objective, GARVELAND will act on public regional development policies and programmes, in particular on investment programmes for growth and employment and, where appropriate, relevant territorial cooperation programmes that address the transition to a low-carbon economy.

By promoting the electric vehicle in the cooperation area, the aim is to achieve sustainable local development, based on reducing pollution, enhancing the value of sites of tourist interest and developing economic opportunities linked to the electric vehicle, while at the same time achieving a better Spanish-Portuguese territorial structure by connecting the two regions through "green routes" and contributing to greater care for protected areas.

Throughout the project, activities will be carried out in order to know the current situation of sustainable mobility in both regions. As pilot experiences, sustainable mobility plans will be carried out in municipalities and protected areas, and an innovation map will be created with the existing technological offer in both regions, in order to detect new business growth opportunities.
